- Git/GitHub
- SQL
- MS Office

Programming

- Java, Python
- HTML, CSS, JavaScript
- Bootstrap

Education

B.Tech, CSE

Priyadarshini J.L. College of Engineering, Nagpur
2022 – 2026 | CGPA: 8.9

Intermediate

Z.P. Highschool and Junior College, Soundad
2020 – 2022 | 89.5%

High School

Navjeevan Vidhyalaya, Raka
2020 | 92.4%

Certifications

- Java Programming – NPTEL (2024)
- Python Programming – NPTEL (2024)
- Website Design & Development Internship – iStudio (2025)
- Employability Skill Training – Mahindra Pride Classroom, Naandi Foundation (2025)

Profile

2026 B.Tech Computer Science Engineering graduate (CGPA: 8.9) with hands-on QA internship experience across web, API and performance testing. Skilled in functional, regression, smoke, sanity and exploratory testing, with practical exposure to Postman, Apache JMeter, Jira and Git/GitHub. Experienced in validating role-based workflows, payment and billing modules, and business logic across real-world client platforms. Seeking an entry-level QA Engineer / Software Tester role.

Work Experience

QA Intern

June 2026 – Present

BotMartz AI Solutions Pvt. Ltd.

» HOAConnect Hub (US-based HOA/Property Management platform)

- On a live production platform (Communities, Buildings, Units, Residents), performed end-to-end functional, regression, UI/responsive, cross-browser and API testing (Postman) to catch defects before release – improving stability.
- Validated payment/invoice/billing workflows and role-based access control while running performance/load testing in Apache JMeter, ensuring dependable financial workflows under load.

» BotMartz Academy (Learning Management Platform)

- Tested login, authentication, session handling and role-based access through functional, regression and exploratory testing, ensuring secure and reliable access control.
- Performed smoke, sanity, UI/responsive testing and form validation, logging detailed bug reports that enabled faster fixes and a stable release.

» IIFCCA

- Verified core platform workflows and business logic through functional, regression, UI and form/input validation testing across major features.
- Tested role-based workflows across user types and tracked defects through to fix verification, contributing to a stable pre-release build.

» Virtual Try-On Application

- Tested the image upload, product selection and try-on workflow end-to-end through functional and exploratory testing, uncovering edge-case failures before release.
- Performed UI/responsive and regression testing across devices and screen sizes, helping deliver a consistent, bug-free release.

Personal Projects

» Dynamic NoteMate Bot AI, Voice Input, PDF Processing

01/2025 – 05/2025

- Built an AI-powered notes chatbot integrating voice input and PDF processing, enabling users to create and retrieve notes through natural conversation.
- Integrated real-time web data fetching, letting the bot answer queries with up-to-date information from the web.

» Paper-Leak Proof Protection Model 3DES Encryption

01/2025 – 05/2025

- Designed and implemented an encrypted file-sharing system using 3DES encryption to prevent unauthorized access to sensitive question papers.
- Tested the model against unauthorized access attempts, validating a working proof-of-concept for leak prevention.
